

CONTOIL® VZD / VZP and DFM Consumption measurement

Applications

Fuel consumption measurement for trucks, buses, trains, construction and agricultural machinery, small boats and generators.

Features

- Quick and easy installation in vehicles of every type
- Supports most used models
- Short down-time (OFF-operation) period
- Proved and tested system
- Easy and accurate reading of engine fuel consumption
- No extra maintenance necessary
- Tamper-proof measurement

Your benefits

- Low installation costs
- Quick and easy installation
- Short down-time of vehicle
- Quick pay-back period

The right product for every application

Suitable for trucks, buses, agricultural and construction vehicles, small river boats

CONTOIL® VZD / VZP System

Flow meters for direct fuel measurement

Suitable for small engines

CONTOIL® VZD 4

The easy way to find your fuel consumption. Just install it and read the values on the display (total, trip, current consumption and more).

CONTOIL® VZP 4

If the installation place is hidden and a read-out on the flow meter not possible, than this flow meter is the right one. Connect it to the CONTOIL® VZD CU and you will have all the necessary information wherever you want it.

Suitable for large engines

CONTOIL® VZD 8

An easy way to find your fuel consumption. At a glance, you have the following information: total, trip, actual fuel consumption and much more. With its digital output, the results can be transferred to a remote host.

CONTOIL® VZP 8

For installation places where the read-out is not easy, choose this flow meter. The built-in LED gives you the function status at any time. The VZD CU is recommended for fuel calculation. Connection to a remote calculator is possible (eg. fleet manager).

Suitable for remote control

CONTOIL® VZD CU

Remote calculator for the VZD/VZP series. Install the VZD Control Unit in the driver cabin and you have all the necessary information about fuel consumption every time. Flow meters from competitors can be connected.

Page 5

CONTOIL® DFM System

Flow meters for differential fuel measurement

Suitable for small engines

CONTOIL® DFM 8D

- Compact 2-chamber system
- Space-saving design
- Built for extreme environments

Suitable for large engines

CONTOIL® DFM 20S / CONTOIL® DFM 25S

- Compact 1-chamber system (2 pieces needed for differential measurement)
- Built for extreme environments
- Suitable for big agricultural and construction vehicles, big river boats, small vessels

Suitable for calculation and data-sending to remote

CONTOIL® DFM-BC (board computer)

- Suitable for all DFM flow meters and other manufacturers' flow meters
- Total, trip, current consumption, info, service (password-protected)
- Configurable input-pulse value (0.1 ml to 9.9 litre)

Page 8

**CONTOIL®
DFM 8EDM**

Flow meter for fleet manager DFM System

CONTOIL® DFM 8EDM

Easy-to-install flow meter – just connect the pipes and the three electrical wires.
The calculated consumption will be sent as a passive pulse and a TTL pulse

Page 12

**CONTOIL®
DFM 8ECO**

CONTOIL® DFM 8ECO

- Newest Reed-Contact-Technology
- Easy installation
- Rugged design

Page 14

**CONTOIL®
DFM 12ECO**

CONTOIL® DFM 12ECO

- Build up for heavy-duty engines
- New design of the fluid flow
- Up to 600 l/h flow

How to measure fuel

Two systems are on the market...

- **Direct consumption**

With this variant, the fuel is sucked out of the tank by the pump and through the preliminary filter, then fed through the fine filter to the mechanical injection pump. Depending on the engine conditions, the injection pump measures the fuel to be injected and forwards it to the individual cylinders. There, the fuel is injected into the combustion chamber by the injection nozzles. The unused fuel is not feeded back to the tank through a separate line, but is fed back into the fuel line after the pump and before the fine filter in order to filter out any mechanical impurities. In this variant, the pump supplies the amount of fuel required by the engine, depending on its operating mode. The pump supply is controlled by the pressure after the pump.

- **Differential consumption**

With this variant, the fuel is sucked out of the tank by the pump and through the preliminary filter, then fed through the fine filter to the mechanical injection pump. Depending on the engine conditions, the injection pump measures the fuel to be injected and forwards it to the individual cylinders. There, the fuel is injected into the combustion chamber by the injection nozzles. The pump's job is to provide 4 to 10 times the amount of fuel that could possibly be used (e.g. for a maximum consumption of 50 l/h, the pump should be able to supply 200 l/h to 500 l/h). This quantity depends on the engine and the manufacturer; the above figures are just guidelines. The unused fuel is returned back to the tank through a separate line. This is the standard in modern engines (common rail, etc.).

CONTOIL® VZD/VZP System

CONTOIL® VZD with digital display shows you all information at a glance

- Total fuel consumption (litre, gal. or kg/m3)
- Correction factor (eg. temperature compensation)
- Daily fuel consumption (litre, gal. or kg/m3)
- Idle time of the engine
- Current consumption (litre, gal. or kg/m3)
- Working time of the engine
- Fuel temperature
- CO₂ measurement (actual and total)

Technical data

- Safety
Tested for vibration, shock and electrical emission and immission (vehicle industry standards)
- Operation temperature of the hydraulic: -30°C to +80°C
- Diesel fuel, domestic fuel oil, engine oil (viscosity max. 6 cSt)

CONTOIL® DFM 8EDM

With integrated differential measurement

- Optimal design for fleet manager owner
- Integrated intelligence
- Passive pulse output
- TTL pulse output
- Compact 2-chamber system
- Space-saving design
- Built for extreme environments

Technical data

- Safety
Tested for vibration, shock and electrical emission and immission (vehicle industry standards)
- Operation temperature of the hydraulic: -30°C to +80°C
- Diesel fuel, domestic fuel oil, engine oil (viscosity max. 6 cSt)

Flow meter specifications

Device	DFM 8EDM
Part number	94954
Hydraulic connection	M14x1.5
Nominal pressure	16
Protection class (IP)	66
Nominal flow rate (l/h)	200
Min. flow rate (l/h)	10
Accuracy (%) better than	1
Repeatability (%)	+/- 0.2
Safety filter mesh size (mm)	N.A
Volume of measuring chamber (ml)	12.44

Electrical specifications

Flow sensor	l/pulse (ml/pulse)	Hz (max.)	Pulse interval (min.)	Pulse width	mA (max.)	VDC (range)	Amplitude (range)
Double sensor DFM 8EDM	0.01244 (12.44)	7	46	20 ms	10	12-24	Equal to power supply

Pulse specification

Passive Pulse

Whenever a pulse is generated, the electronic switch at the DFM 8EDM will be closed and the incoming 12-24VDC will be redirected to the external device.

TTL-Pulse

Below 0.8 VDC = pulse (logic 0)
Between 0.8 – 2.8 VDC is not defined
Over 2.8 VDC = no pulse (logic 1)

Additional Information

Fuel Oil

Our fuel flow meters are manufactured to run according to the fuel oil specification in the norm ISO 8217-2010. This norm specifies the characteristics of the fuel. Fuel oil with **low sulphur** can be used if it follows the rules specified in the mentioned norm.

A few parameters from this norm are listed in the table below.

Characteristics of different fuels

Fuel			Diesel *)	MGO 2 **)	MDO 2 **)
Density at 15°C	min.	Kg/l	0.820		
	max.	Kg/l	0.845		
Viscosity at 40°C		mPa.s	1.5 – 4.5	2-6	2-11
Lubricity value (HFRR)	max.	µm	470	520	520
Sulphur ***)	max.	%m/m		1.50	2.00

*) Diesel, diesel oil or AGO (Automotive GasOil) are the same

**) Also used for river boats

**)Max. value – normally, the value is much lower

Pressure drop curves

Viscosity information

Kinematic viscosity

Stokes, Centi-Stokes, mm²/s

St, cSt, mm²/s

Dynamic viscosity

Pascal seconds, millipascal seconds

Pas, mPa.s

Poise, Centipoise (outmoded)

P, cP

Conversion

cSt 3 density = mPa.s

Engler degrees °E to mPa.s: only use conversion table

Saybolt units to mPa.s: only use conversion table

Redwood units to mPa.s: only use conversion table

Rule of thumb

1 cSt ~ 1 mm²/s ~ 1 mPa.s

CONTOIL® VZD 4, VZP 4

CONTOIL® VZD 8, VZP 8, DFM 8D, DFM 8EDM, DFM 8ECO, DFM 12ECO

CONTOIL® DFM 20S

CONTOIL® DFM 25S

Viscosity diagrams:

A = 5 mPa.s
B = 50 mPa.s

C = 100 mPa.s
D = 200 mPa.s

E = 500 mPa.s

For a pressure drop of more than 1 bar, it is recommended to use the next larger meter size.

Maximum permissible pressure drop = 3 bar

Your savings

Example for trucks

Below are examples on how easy it is to calculate what this system is worth to you:

Operating data of vehicle (examples)

Km per day	200	200	500	750
Consumption in litres per 100 km	30	30	30	30
Operation days per year	250	250	250	250
Operation km per year	50'000	50'000	125'000	187'000
Operation liters per year	15'000	15'000	37'500	56'250
Influence of fuel price				
Fuel price per litre in euros (assumption) ¹⁾	1.36	1.36	1.36	1.36
Fuel cost per year in euros	20'400	20'400	51'000	76'500
Return on Investment				
Complete investment cost in euros (example) ²⁾	1'400	1'400	1'400	1'400
Estimated reduction of fuel cost in %	20	15	10	5
Savings of fuel cost per year in euros	4'080	3'060	5'100	3'825
Pay-back time in months	4	5	3	4
Money saved in the first 12 months	2'680	1'660	3'700	2'425

1) Average price of diesel fuel in Europe

2) DFM 8D used for this example. Complete investment cost may vary from country to country due to local situations.

Includes flow sensors, board computer, all transport and import costs, installation and start-up of system.

Take the example from the third column: with the above vehicle operating data and 10% estimated reduction of fuel cost, the investment will pay back its costs after only three months. Since the figures are different in each area, they have to be adapted to individual values. Ask your authorised dealer for a personal assessment. He will calculate your possible cost savings based on your vehicle data, operating conditions and the local cost situation.
